Poly[d(G-m^5C)]:poly[d(G-m^5C)], interaction with daunomycin, 1839
Poly[d(G-T)]:poly[d(A-C)], interaction with daunomycin, 1839
Poly[d(I-C)]:poly[d(I-C)], interaction with daunomycin, 1839
Polyethylene glycol, 865
Poly(L-Lysine), helix formation by $NaClO_4$, 1627
—, melting temperatures, 1627

Polypentapeptide of elastin, 1787
Polypeptide chain, 1189
Polypeptides, 733, 805, 1143, 1189, 1267, 1283
—, cardioactive, 1143
—, helical conformation, 41
Polysaccharides, 1055, 1619
Poly(trimethyl-L-Lysine), helix formation by $NaClO_4$, 1627
—, melting temperatures, 1627
Potential energy, 1519
Probe molecules, 173
Prolylglycine hexapeptide, PG_3, structure, calcium binding, 1865
Protein, 1065
Protein backbone motion, 1787
Protein binding to DNA, analysis of, from salt dissociation curves, 1459
—, by a sperm-specific protein from *Spisula solidissima*, 1459
—, cooperativity in, 1459
—, direct simulation of binding curves, 1459
Protein conformational dynamics, 1699
Protein films, 1329
Protein folding, 1283
Protein-folding transition, 527
Protein α-helix content, 451
Proteins, 1001
—, FT-IR spectra of, 1831
—, stochastic simulations, 1001
Protein structures, flexible hinges, 23
Protein-unfolding transition, 527
Pseudorotation potential of deoxyribose, 1817
Pulsed field electrophoresis (PFE), 1449

Raman spectra of A · T containing polynucleotides and DNA, 1817
Receptor proteins, 1171
Resonance coupling, 1795
Restrained molecular dynamics, 323
Ribonuclease A, 1, 423
—, conformational unfolding, 1
Rotational diffusion, of broken rods, 1771
—, of segmentally flexible macromolecules, 1771

Saccharide optical activity, 415
Saccharides, 415
Saccharomyces cerevisiae, 431
Scanning calorimetry data, 271
Scanning simulation method, 1189
Scanning tunneling microscopy, 1691
Scatchard plots, 79
Self-dissociation/association process, 271
Sequential polypeptides, 213
Skeletal muscle, 1127
Small angle neutron scattering (SANS), 1065
Small angle x-ray scattering (SAXS), 1065
Sodium dodecyl sulfate solution, 423
Sodium-D rotation, 415
Sodium salts, 1267
Solute diffusion, cells, 97
—, vesicles, 97
Solution state structure models, distance and angle constrained conformation searches in, 1571
Solvent viscosity, effect on protein conformational dynamics, 1699
Somatostatin analogues, 323
Spectrophotometric binding, intercalator-DNA, 1433
Stacking, 1085
Statistical mechanics, 1479
Structure, 1519
Sugar flexibility during $\overline{B}$–$\overline{A}$ transition in DNA, 1817
Sugar puckers, the population of S- and N-type, 1817
Supercoiled DNA, 1479
Superoxide, 251
Superoxide dismutase, 251
Synthetic emerimicin fragments, 683

Tanford–Kirkwood theory, 617
Tetrapeptides, 1353
Thermal denaturation, 1479
Thermodynamic functions, 271
Transitions, 1519
Translational diffusion, of broken rods, 1771
—, of segmentally flexible macromolecules, 1771
Transmembrane (TM) signal transduction, 1171
Triple-helix structure, 1749
Trivalent lanthanide cations, 1183
Tropomyosin, 1127
$\beta\beta$ tropomyosin, 1223
Troponin I, 821
Tryptophan residues, 629
Tuber starch granules, 1205
Two-chain coiled coil, 1223
Two-level systems, 1859

Ultraviolet (UV) spectroscopy, 629

Vasopressin, 939
VGG, vibrational spectroscopy, 885
Vibrational CD (VCD), 733
Vibrational mode of deoxyribose, 1817
Viscosity, intercalator-DNA, 1433
Voronoi polyhedra, 339

Water relaxation, 1655

Xanthan, conformation change of, 1641
—, double-stranded helix of, 1641
—, light scattering from, 1641

Yeasts, 1055
—, cell walls, 1055

Z-DNA, 187, 1319, 1415, 1687
—, condensation of, 1375
—, energetics of formation, 1375
Z-helix hairpin, 1319
Z to A transition, 1183
